FOR ANY WORK AT HEIGHT

Nothing should fall on a crew because a check was missed.

Telepresenz turns the dropped object checklists you already use, for pre-task checks and periodic DROPS inspections, into guided mobile inspections with photo proof and supervisor sign-off. Upload them free, and one crew runs them for 7 days.

Never alone. Never guessing. Always provable.

Every 10 minutes

In the US, a worker is struck by an object falling from above about every 10 minutes.

Source: ISEA

After an incident, the first question is: show me the last check.

The checklist lives on paper.
It gets ticked off in the field, and nobody sees it until someone types it up, if they ever do.

The evidence lives on phones.
The photos get taken, but nothing links them to the asset or the step.

The proof arrives too late.
Audits and contractor pre-qualification wait while someone hunts for records.

The next inspection is due, and nobody knows.
Periodic inspections live in a spreadsheet or in someone's head, so the intervals slip until an audit finds them.

Upload 3 to 10 checklists free. One crew runs them for 7 days.

For drilling and offshore, refineries, wind, towers, construction, mining, ports and facilities.

Built around the crew doing the check

NEVER GUESSING

Start with what you already have.

We use your checklists, not a template library.

ALWAYS PROVABLE

Guide every step, capture the proof.

Each step gets a Pass or Fail, and a photo is required wherever it matters.

NEVER ALONE

Nobody spots a hazard alone.

A failed check alerts your safety contact, a supervisor signs off and an expert can join live.

YOUR CALL

AI drafts, people decide.

Every AI addition is flagged and linked to your source. Nothing goes live until you approve it.

Questions your team will ask

How does the free trial work?

Upload 3 to 10 checklists, approve the drafts, and one crew runs them for 7 days. Only your team sees your files.

Does it work in hazardous areas and offline?

Yes, and offline. It works on ruggedised handhelds certified for hazardous areas (ATEX and IECEx Zone 1, Class I Division 1), including the RealWear HMT-1Z1 wearable.

What happens after the 7 days?

Stop and walk away, or start a 4 to 8 week Proof of Value at one site. Nothing converts to a paid plan automatically.

What happens to our data?

Your files stay in your account, encrypted in transit and at rest. Telepresenz is ISO 27001 and ISO 9001 certified.

Everything one crew needs to run dropped object checks properly

- ✓ SOP import, with every step linked to its source
- ✓ Pass or Fail inspections with required photo steps
- ✓ Recurring inspection schedules by asset, with due-date reminders
- ✓ Supervisor sign-off
- ✓ Records locked after sign-off, exportable for auditors and clients
- ✓ Hazard alerts to safety contacts
- ✓ One dashboard by part, asset or site
- ✓ Asset register with T1 to T4 classification and full history per asset
- ✓ Android, iOS and RealWear headsets, including the HMT-1Z1 for hazardous areas
- ✓ Findings and evidence tracking
- ✓ Remote expert assistance

Built for the inspections you're required to run

Your interval might come from a regulator, a client contract or your own DROPS scheme. Either way, you can produce the record in minutes.

Before every job. Pre-task checks for tools at height, exclusion zones and secured equipment.

On a schedule. Periodic DROPS inspections of structures, fixtures and lifting gear, at the intervals you set.

PROVEN ON THE SAME PLATFORM

90% less manual reporting time

Honeywell Building Technologies used SmartOPS for digital rounds at Fort Liberty, US Army, with 100% digital traceability.
